DELIVERING LIFE-CHANGING VISION CARE: ESSILOR'S SEE CHANGE REPORT

Just published, Essilor's See Change report shares initiatives from the Group and its partners that have helped bring vision care to millions of people worldwide and contribute to global sustainable development.

The report explores how research and advocacy, inclusive business and strategic-giving programs are tackling the two biggest barriers to vision care - awareness and access - in order to improve the sight and lives of 50 million people by 2020. It also celebrates Essilor's achievements since 2012 equipping 6m people with their first pair of glasses and creating 4,000 primary vision care providers through:

- scaling up new inclusive business models like Eye Mitra in India, Vision Ambassadors in China, Brazil, Indonesia, Ivory Coast and mobile vision clinics
- expanding affordable vision care to 30 countries across Asia, Africa and Latin America
- engaging a growing number of employees, customers and partners in raising awareness and improving vision health in their communities.

A key focus for the report is the importance of partnerships to combine knowledge and resources to achieve greater impact. 2.5 billion people, 90% of whom live in developing countries, suffer from uncorrected vision and its consequences. Yet a solution as simple as a pair of glasses can immediately and positively impact the daily lives of individuals, their families and communities.

Galvanizing multi-sector efforts on a scale similar to global health interventions to eradicate polio, combat malaria and HIV/AIDS, would create the critical mass to improve the future of visual health worldwide and drive sustainable world development.
